Nokia Solutions and Networks is enhancing its Liquid Applications for accelerated content delivery and real-time utilization of network information by making use of advanced cloud technology within the base station. These new capabilities enable new classes of services for consumers, enterprises and other market segments. The company is also further extending its Liquid Broadband portfolio to address all aspects of content delivery from voice to video as networks evolve to all IP.

Motorola Solutions, Inc., through its strategic investment arm Motorola Solutions Venture Capital, has invested in **Revionics**, a global provider of End-to-End Merchandise Optimization solutions that enable retailers to transform from product-centricity to shopper-centricity and make data-driven merchandise planning decisions. This investment will be used to further accelerate Revionics' global growth into new markets and expand research and development efforts.

Vasona Networks, Inc., a provider of platforms for mobile network capacity, resource management and intelligence, today announces the SmartVISION analysis suite. Mobile operators deploy SmartVISION for visibility about application activities within each cell of a network, including every session's impact on capacity utilization and congestion conditions.

Acta S.p.A., a clean energy products company, is pleased to announce the signing of a wide-ranging cooperation agreement with **ReliOn Inc.**, one of the largest fuel cell manufacturers in the world specialising in back-up power systems for telecom, government and transportation applications. The Agreement gives Acta a broader commercial offering and a second supplier of key fuel cell components.

The new R&S SMW-K541 digital predistortion option from **Rohde & Schwarz** allows users to import predistortion coefficient tables directly into the R&S SMW200A. The signal generator uses these delta values to adjust the baseband signal in realtime.
