FirstNews Briefs: Radisys, Voxox, Impact Telecom, Iris Wireless, Garmin

Wireless Week Staff

Radisys Corporation today announced the availability of WebConnect JAVA - a JSR-309 compliant adapter which is compatible with the entire Radisys Media Resource Function (MRF) product family. Java Enterprise Edition (Java EE) application developers are now able to leverage Radisys WebConnect to utilize, and control, Radisys media processing capabilities for the real-time services they are developing.

Voxox, a cloud-based rich communication service for consumers and businesses, today announced that the company has signed a distribution partnership agreement with leading technology services distributor, **Telecom Brokerage, Inc.** (TBI). TBI will offer solutions from the Voxox business services portfolio with a focus on SIP Trunking, along with offering other Voxox business solutions, such as Hosted PBX, VoIP termination and origination, wholesale SMS, audio conferencing, and the company's new virtual PBX service, Cloud Phone.

Impact Telecom, a global provider of voice, data and messaging services, announced it signed a Managed Services Agreement with **Iris Wireless Ltd.**, naming Impact's Global Mobility Group the technology, sales and operations provider for Iris Wireless. This will enable Impact and Iris Wireless to implement mobile messaging technology in the telecommunications industry.

Garmin International Inc. today announced víago, a new navigation app for Android and iPhone starting at $1.99. Garmin víago offers navigation features not available from free apps. The app comes with access to off-board maps for many regions around the world and navigation features such as current speed and speed limit display, lane assist, weather information, in-map traffic display, and photo-realistic junction views.
