

## **Open Garden seeks to crowdsource mobile connectivity**

CNET

Open Garden wants to help you share your Internet connection with every Wi-Fi-enabled device within 20 meters.

The San Francisco-based mobile startup, which launched today at the TechCrunch Disrupt conference, lets users create a large mesh network that allows all the Open Garden-enabled devices to automatically share Internet access and bandwidth, according to a [TechCrunch report](#) [1]. Essentially, what Open Garden wants to do is create a crowdsourcing platform for mobile connectivity.
