

## **FirstNews Briefs: RacoWireless, CALLUP, Cloudberry, Telit, Ceragon, Exalt**

Wireless Week Staff

**RacoWireless** today announced that it has been chosen to support **Audi**'s new lineup of 4G LTE connected vehicles in the Audi connect program. Providing complete connectivity management, including 24/7/365 call center support, RacoWireless will work with **AT&T** to deliver an in-car infotainment system.

**CALLUP**, a provider of Value Added Services (VAS) and Mobile Device Management (MDM) solutions for the telecom industry, today announced that at the Mobile World Congress it will introduce Smart Fi – a carrier-grade system for data offloading. The new system allows cellular operators to offer their customers automatic access to Wi-Fi hotspots for data communications, without requiring any proactive steps from the user.

**Cloudberry Mobile**, a provider of turnkey small cell solutions as a managed service, today announced its ability to integrate small cells into their networks to improve indoor coverage and add capacity in 16 hours working in a live environment, compared with typical timeframes of weeks.

**Telit Wireless Solutions**, a global provider of M2M solutions, products and services, and **DCS Solutions**, a provider of wireless data products, solutions, and services to the wireless data market, today announced that DCS is to employ Telit's DE910-DUAL PCIe CDMA|EV-DO cellular data card for mobile data communications in its DCS-559 Wireless N-Router.

**Ceragon Networks Ltd.**, a wireless hauling specialist, and **TESSCO Technologies Incorporated** today announced that Ceragon's IP-20 platform is now available through TESSCO. As an SDN-ready wireless platform powered by a software-defined engine, the IP-20 features backhaul and fronthaul solutions that deliver high capacities while supporting any radio transmission technology, any network topology, and any deployment configuration.

**Exalt Communications, Inc.**, a provider of next-generation packet microwave backhaul systems, today announced that **Prolight International**, a wireless Internet service provider based in Giza, Egypt has deployed Exalt microwave backhaul systems to deliver broadband and VoIP services to its business and residential customers across Egypt.
