

## **FirstNews Briefs: Huawei, PCTEL, AirTight, Roadnet**

**Huawei** introduced the enhanced version of its enterprise LTE (eLTE) broadband trunking solution. The enhanced version, named eLTE 3.1 Broadband Trunking Solution, will enable enterprises to become better equipped for the opportunities and challenges brought to existing LTE networks by big data.

**PCTEL, Inc.** announced the launch of its new dual-band WiFi antennas for in-building wireless networks. PCTEL's new MIMO flat panel antenna maximizes data throughput. The MIMO antenna's pattern control achieves indoor performance with minimal interference.

**AirTight Networks**, a global provider of secure cloud-managed Wi-Fi, announced a new program - EZ Street - to help resellers transition from selling boxes and licenses to delivering MSP-class cloud Wi-Fi, security, big data analytics and customer engagement with no upfront costs.

**Roadnet Technologies**, a provider of logistics software and technology, announced the release of its new web-based software solution, Roadnet Anywhere. This new solution will allow small to mid-sized organizations to develop efficient routes and track them throughout the day. Roadnet Anywhere can be deployed in days without any hardware and with low upfront costs.
