

FirstNews Briefs: Huawei, Comtech EF, SureCall, Peel, GivMobile

Wireless Week Staff

Huawei and **Comtech EF Data Corporation**, an integrated SatCom infrastructure solutions provider, today announced the launch of an integrated satellite network solution platform for Premium Enterprise Network services following a successful interoperability test of Comtech EF Data's Advanced VSAT Solutions and Huawei's communication equipment including AR series routers, unified communications, telepresence and video monitoring equipment for emergency communications and restoral application.

SureCall, a maker of cell phone signal boosters, announced today that its M2M, or machine-to-machine, booster designed for use throughout many industries that use cellular modems to transmit data, has received FCC certification under the commission's new regulatory and technical standards.

Peel, the smart remote app with over 58 million activated users, has been preloaded on the new **Samsung's** Galaxy S5 as "Smart Remote."

GivMobile, a no-contract mobile service that gives eight percent of the customer's monthly plan to the charity of their choice, recently unveiled its newest promotion to the public. The cellular service provider is giving away a no-cost Android device to customers who sign up for a plan with the company.
