

Evaluation of Carrier Class Session Border Controller software

Submitted by msievers on Mon, 08/19/2013 - 11:52am Metaswitch

Miercom evaluated the Metaswitch Perimeta Session Border Controller (SBC) software, running on commercial Dell server and ATCA hardware, for performance, scalability, reliability, and security in various usage scenarios and deployment modes. They concluded that the Perimeta software exceeded alternative offerings in the most important metrics, affording exceptional value for network operators in both access and interconnect SBC deployments. **Learn more by downloading the complete report.**
