

Monitoring App Behavior - Are you responsible?

Submitted by btomasino on Thu, 01/23/2014 - 1:40pm Anritsu

Inside this White Paper we will show an Signaling Tester which emulates an end - to - end 4G wireless network. It is desirable to use a network emulator since the goal is to monitor and understand the overall behavior of a smartphone and the impact that it would place on a live network before the device or application is permitted to operate on the live network.
